UPDATE

Make sure that already logged in users won't be redirected to login again. Make sure Mobile users can click on Hamburger Icon to draw out other options when they click on the dashboard. Let the "Support Ticket"/Create free account/ "Get Started" disappear from the home page after users are being logged in and make sure nothing redirects them to Login again while exploring other features after being logged in.

Make sure the platform is not plan, it should be animated and styled premium background, and the home page should be animated and looking Glassmorphism animated UI style UX Theme designed platform with Card styled premium Glassmorphism. The navbar must be in card styled background and please enhance the color for premium looks. This platform should be like a professional detailed platform. Finally make sure everything works end-to-end. Enhance the platform name to look designed and luxury. Make sure notifications are not sent to the History page.

Check the group creation and confirm there's no issue, I created a group but it didn't publish on the home page and I also tried to make it go live but it didn't work and it said "failed to fetch". Also admin should be able to edit existing groups, kick Users from specific groups, restrict users from specific groups, manually edit username trust score, see image that was sent to support. banned users will not exist on the leaderboard or access their account unless they are unbanned by the admin. They should contact the admin to unban them. Admin can see platform stats on overview, see total revenue in overview, see platform chart in overview. List of members and roles including defaulters should also display on admin overview page and can send notifications to All members, specific members, VIP member, defaulter, members with trust scores above 50+. The system must send notifications to members on activities done to them. Admin can see users last login timestamp and date, and can see user full audit logs and transaction history. Animate admin page. I run the overall test to confirm everything is working perfectlyCheck the group creation and confirm there's no issue, I created a group put it didn't publish in the home page and I also tried to make it go live but it didn't work and it said "failed to fetch". Also admin should be able to edit existing groups, kick Users from specific groups, restrict users from specific groups, manually edit username trust score, see image that was sent to support. banned users will not exist on the leaderboard or access their account unless they are unbanned by the admin. They should contact the admin to unban them. Admin can see platform stats on overview, see total revenue in overview, see platform chart in overview. List of members and roles including defaulters should also display on admin overview page and can send notifications to All members, specific members, VIP member, defaulter, members with trust scores above 50+. The system must send notifications to members on activities done to them. Admin can see users last login timestamp and date, and can see user full audit logs and transaction history. Animate admin page. Run overall test see to confirm everything in working perfectly

Add a banned user landing page that shows a message telling them to contact admin to get unbanned, instead of just redirecting to login. In the group page, logged in user can choose seat numbers, make payments for the seat they choose. They can pay the total amount for all the seats they selected (if they selected multiple seat numbers) if they submit payment the system

will automatically add set number(s) in the description for the admin to know. Select seat "next" confirm seat number(s) [system display choose seat numbers] User and modify seat order "next" copy payment details, click I HAVE MADE PAYMENT "next" Attache image or file payment prove then click on SUBMIT PAYMENT (Pop-up information: YOUR PAYMENT IS PENDING, THE ADMIN WILL CONFIRM YOUR PAYMENT AND APPROVE IT IF SUCCESSFULLY RECEIVED, if approved you will receive a notification that it has be approved. Note that this can take 24hrs before admin can receive payment depending on bank network). Admin should be able to make disbursed to specific claimed seat (system must send notifications to user in that seat when disbursed by admin). In group seat indicator: Seat already taken(red) / Seat available (green) / Your seat (yellow) / Reserved seat (golden). Steps admin can take to create groups: Group Name/ Description/ how much users can deposit (Daily/Weekly/Bi Weekly/Monthly)/ How much users will receive (Daily/Weekly/Bi Weekly/ Monthly). Users can choose their gender and must add a nickname while creating an account. When an admin creates groups it should display for users to see and access then the admin can make it go live anytime. System must automatically send out notifications to all users when group is out and when group is live. Put these update and make sure you go through everything thoroughly to make sure there's no errors, issues, crash, bug, glitch. List of members in a specific group should display in that group with according to their seat number(s). Note: name can be displayed multiple times on Group members list based on the numbers selected. Member list must include: user nickname/User role/VIP tag (if made VIP)/trust score. (Note:Do not show users username and full name on leaderboard)
Also check the announcements circles, I tried to post announcements to home page but it's not letting me choose the tag for it (ANNOUNCEMENTS/PROMOTE/SERVER MAINTENANCE) please make sure it's as it is in the repo. make sure that both the group announcements/ home page announcement/roles to receive checks to complete and announcement /information announcements settings are complete as in the repo, Make sure admin can attach image or file to optionally reply report tickets or view image or file users attached to tickets.

Add the uploaded images below to the homepage for visitors to view. The image contains an advert for my platform.

Make you I add the BOLD live digital timer in the groups on Top after group name and description, it must countdown when the group is live in 24hrs format(HH/MM/SS). When the clock counts down to 00Hrs 00mins 00secs those that haven't made payment for that day will be marked as defaulter. and systems will send notifications to them about it. System will also automatically remind users that haven't made payment to go and make payment for their seats in groups

Add terms and conditions users need to accept while creating an account. (note: admin should also have access to manually edit it Incase of police update) user name to read the Terms and Conditions and click on "I Accept" before they can continue account creation. Make sure you also add it in their audit logs as "You accepted the platform terms and conditions before creating this account" (timestamp)

The home page announcement display should be like in the image I just uploaded.

Make sure the admin can see the user's current password. In case they need support with their previous password, the admin can generate passwords for users in case they want to generate a password by the admin.

Also display users profile image on group leaderboard (member list)
The member list should be displayed in groups like the image I uploaded.

Users should be able to see the group and join it even before it goes LIVE.

User can upload images and file to support ticket while making reports
Selected seats should be marked as reserved when a user clicks on I've made payment, and when they get declined the seat should be available to be selected by the same user or another user as long as the payment for the seat(s) is declined. do not display users that their payments are pending on the leaderboard and group member list. BUT after the first approved payment for the seat(s) it can be made as claimed and can not be reclaimed by another user except admin remove user from that seat.

During the daily payment in the group,uses can modify the seat they want to pay for or click on "make payments for all your seat(s)"
To pay for each of their claimed seat they need to manually input the seat number [eg: S1] if they want to manually input some of their seat numbers they can do it in the format to identify the seats that are paying for [eg: S1+S4+S5] (Note: they must put "+" in it if they manually want to make payments for specific seats ONLY if they have multiple seats numbers they have already selected before)

Also add the EXIT THIS GROUP button in all the groups (NOTE: when user clicks on this a pop-up information will ask are you sure you want to leave this group? If user select YES then another pop-up information will tell them their request has been sent to the admin and they

should make sure they are not owing before leaving) admin can decline or accept this request from the Exit group page in the admin home page

Also add the SEAT CHANGING REQUEST button in every group (note: when user clicks on this they need to select another available seat "next" seat they want to replace "next" seat they want to replace with "next" why they want to change seat(s)) Admin will see this and approve or verify in the Seat Change page that is in the admin Page.

Leaderboard in home page should be displayed according to trust score (high~low) top higher trust score.

While member list in the group should be displayed according to seat(s) number (seat numbers/user profile image/user Nickname/ VIP(if given)) [note: users nicknames can be repeated on the member list depending on the seat number(s) if they select multiple seats.

Make sure that users in the group get notifications when the group is live. make sure the admin can send announcements to display under group Live clock. (admin can delete the announcements too).

Users can also edit their selected gender.

Make sure the announcements in the home page are not visible to visitors, if they haven't logged in or created an account. It will only be visible if visitors are already logged in.

Add forgetting password features for users that forgot their password

Fix all errors and issues in this platform and make sure all features are working perfectly well before I can publish this again.

Now run overall check and verify everything works perfectly without any damage done/error code/issues/bugs/glitch

Admin Panel & Member Management

- **Seat Removal & Management:** In the "Seat removal" in admin panel, make sure to add all the members of every group and features for admin to view, remove them from seats in a specific group or kick them out of a specific group.
- **Member List Fix:** Member list in the admin panel is not working. Admin panel > Groups > members (this feature is not working, it's not displaying members of the group and how I can manage them in the group [remove members from this group/time member out from chatting in the group/remove member from specific seat number).
- **Group Stats:** The member list in the groups should also show total number of users of that group and total number of seats selected in that group.

- **Ticket System:** Admin can choose to close open ticket report or reopen a closed ticket report. Users can reply to open reports to converse with the admin about the report in the open ticket report they created.
- **Disbursement Management:** Create a disbursement option in the admin panel. Admin can choose users(s) and seat(s) to mark as DISBURSED/input amount disbursed/Description/Input Image. After admin confirm user disbursement(s) the system will automatically add unique code to the disbursement for fast tracking and the system will also send the user a notification telling them that they've been disbursed and they should check their bank as it might take up to 24hrs before they can receive disbursements on their banks.
- **Terms and Conditions Management:** Admin will be able to manually edit terms and conditions via admin panel.
- **Restricted users:** if admin put restriction on user admin should add description why they got restricted/ Frozen. They shouldn't be able to view groups if they get restricted (if they click on group, the system will pop out notifications telling them that they are restricted for the following reasons:{admin input reason})
- **Banned Users:** If admin ban users, admin should also put description why they got banned, the system will automatically kick the banned users out with pop out information (if they click on group, the system will pop out notifications telling them that they are banned for the following reasons:{admin input reason}) if they are already login and also restrict them from login in except admin remove ban from them

2. Account Creation & Identity (KYC)

- **Step 1 (Personal):** First name/Middle name/ Last name/ Preferred Nickname/ Select Gender/Date of Birth/ Email address/ Phone number/ input your WhatsApp number (note that the admin might contact you on this number to confirm if it's working and if it's proven not to be yours the admin can ban or restrict you from joining any groups on this platform)/Preferred username/ preferred password/Confirm password.
- **Step 2 (Location):** "NEXT" State of origin {list all state in Nigeria}/ Input Local Government Area/ input full home address/ Current State where you are now/ Current full address.
- **Step 3 (Financial/BVN):** "NEXT" Input your Account details for disbursement (note: make sure your account details are correct before submitting to avoid wrong disbursement): Full name on account/ input bank/ input account number/ Input your BVN [Why we ask for your BVN: Your BVN is required to verify your identity. This is legally required as part of the Know Your Customer (KYC) process. We require this number from you as a means of verifying your identity. Please note that your BVN does NOT give us access to your bank details. It is only used for verification which makes it easy for you to deposit and withdraw your funds as well as keep our platform safe from scammers.]

- **Step 4 (Legal):** Users must accept terms and conditions to continue account creation.
- **Final Confirmation:** "Submit" (pop-up information: Are you sure your bank details are correct? {display account details the user inputted} if this is not correct please click "Back" to modify it, if it's correct then click "Submit" to continue.

  Note users can edit all of this again via their profile after creating account, they can also change password.

3. Group Creation & Payment Logic

- **Group Creation Format:** Admin should be able to manually add number of days users can collect disbursement in the group, admin can create groups in this format: Input group name/ Input description/ How much users must deposit/ How much members will receive/ set how many days members will be receive disbursement (Daily/weekly/ monthly or manually input number of week or month) / How many day(s) user must make payments {Daily/Weekly/monthly or specific number of days}.
- **Seat Status:** This seat must be marked as Reserved if admin haven't approved their payments and must be open again if admin decline their payments and must also be marked as claimed if admin approve their payments.
- **Debt Tracking:** Admin can see total debt of listed specific users with timestamp if they didn't pay for the day or any other day for any group even if the group no longer exist. User can see their debt they owe for the group even if the group is deleted.

4. UI/UX & Design

- **Homepage Design:** The created groups will display in homepage as: Group Name/ group description/Deposit {Amount} to pack {Amount) every {number or days/daily/week/month} in glassmorphism card format, users can click to join. [Note: do not change any other thing in the groups and it’s features, every other features/joining system/selecting group systems/Payment method/etc must be the same].
- **Media Update:** Remove the video in the home page and add all these images I just attached to this and let them display accordingly in Crossfade animation format. (Replace the video with images).mha
- **Timer & Clock:** Make the DIGITAL TIMER on every groups bold and premium designed style. Any announcement sent to any group specific must display under the Live clock in that group with ANNOUNCEMENTS tag.
- **Timer Trigger:** NOTE: this is optional for admin to input but if admin chooses to set user daily payment to weekly it should trigger the LIVE timer in the groups to count down from DDD(days/Days of the month if set to monthly)/HH(Hours)/MM(Minutes)/SS(Seconds).

- **Notifications:** The notification icon at the left top of the page should show red indicator that tells the user that there's a new unread notification, it will disappear if user read the notification. (Notification badge style).
- **User Disbursement Page:** Give users specific page in their dashboard where they can see disbursement records, they can click on it to see it and they can click on the image to view the proof.

5. Real-Time & System Integrity

- **Real-Time Updates:** Why do I or users need to refresh the page to get updated (chats/notifications/group update/etc) everything should be responding immediately especially the chatting systems.
- **Error Handling:** Run an overall check and fix every error/bug/failed to fetch. so that I can publish freely without encountering any issues while making usage of the platform. Fix every bug, error 404, error, issues, failed to fetch. Run a thoroughly general overall test to make sure everything works perfectly.

6. Guide Tips & Tutorials

- **User Guide Page:** Add a page (TIPS AND HELP FOR USERS) and name it "GUIDE TIPS" where users can go and see tutorial on how to explore the platform (e.g., selecting seats, making payment, how to join a group, etc.).
- **Guide Logic:** Make sure only what users can do is mentioned here. (Note: do not disclose admin panel features).
- **Admin Access:** Give admin access to this page incase admin wants to manually update the "guide tips" admin can also add to it or edit it and can also add image to this tips if neeed
